

How to Make an App For Beginners

Lesson 1
Cheatsheet

1. **Status Bar:** Contains controls to run/stop your project, a dropdown to choose which iOS simulator to run your project on, a messaging area to tell you what Xcode is doing and finally buttons to show/hide various parts of the Xcode user interface.
2. **Navigator Area:** Contains a way to select different files in your project. Other tabs allow you to navigate through issues, breakpoint among other things.
3. **Document Outline:** Show when you've selected the storyboard or launch screen. Shows the elements in your view in a tree view.
4. **Editor Area:** The main area where you write code and customize your user interface.
5. **Inspector Area:** Contains configurable settings for the element or file you've selected
6. **Library Area:** Contains re-usable code snippets and elements for your view.

My Favorite Xcode Shortcuts:

CMD + R: Run your project

CMD + B: Compile your code (without running your project)

CMD + F: Find in document

CMD + Shift + F: Find all in project

OPTION + CMD + Enter: Open Assistant Editor

CMD + Enter: Open Standard Editor

ESC: Open up the Auto-Complete dialog

There are more shortcuts than this but these are the most commonly used and will increase your productivity the most.
